

Online Math Opportunity for Low-Income Students

Got Dreams?

The Math Forum @ Drexel is offering a limited opportunity for approximately 200 high-ability, low-income students in grades 9 and 10 to participate in an online mathematics learning support program.

Sponsored by the Jack Kent Cooke Foundation, this program will provide mentors to support the students' participation in the Math Forum's Problems of the Week and establish a community environment that encourages them to prepare for college and successful careers.

If you are a teacher or school official who has students you would like to recommend for this program, please contact Ian Underwood at ian@mathforum.org.
